China's Requirements for Continued Nuclear Testing	
China now plans to conduct at least three underground nuclear tests next year—after plans to conduct three tests in a single year were changed in each of the two previous years—in order to complete its testing program before the onset of winter in 1996. The planned tests are part of a Chinese weapons modernization program that includes developing warheads for new ballistic missiles and technologies to enhance confidence in the warheads planned for China's stockpile under a nuclear test ban. A failure or delay of the remaining tests could extend the testing schedule and delay China's acceptance of a Comprehensive Test Ban Treaty (CTBT).	Likely Objectives of the 1995-96 Nuclear Tests
