Instructions:

The exam has 19 problems in three parts. The students in section 10 are required to do the first and second parts while the students in section 11 are required to do the second and third parts. Any problems done in a part that is not required of your section will count for extra credit. Good luck with the exam!

Part one (Section 10 must do these for credit, section 11 may work them for extra credit):
$1 p t$ The pV diagram is shown for a heat engine. The heat flow for two of the stages is shown in the figure. The horizontal axis is scaled in units of $\mathrm{V}=400 \mathrm{~cm}^{3}$ and the vertical axis is scaled in units of $p=200 \mathrm{kPa}$. Find the heat extracted from the hot reservoir for this heat engine.

(in J )
$1 p t$ Find the efficiency of the heat engine.

## $1 p t$

Part two (Sections 10 and 11 must do these for credit):
$1 p t$ A diver is 76 m deep in a mountain lake, where the temperature at this depth is $9^{\circ} \mathrm{C}$. While he is down there, the air bubbles that he exhales have a diameter of 1.9 cm . The bubbles rise to the surface of the lake, where the ambient temperature is $21^{\circ} \mathrm{C}$. What is the diameter of the air bubbles when they reach the surface of the lake? You may assume that the bubbles are in thermal equilibrium with the water surrounding them. (in cm )

1 pt At a dull formal banquet one evening, you get served a watery flavorless soup with little meatballs floating on the surface. You decide to amuse yourself by adding more and more salt to the soup, thus increasing the density of the soup. What will the meatballs do?
8. $\mathbf{A} \bigcirc$ they will sink to the bottom of the soup bowl $\mathbf{B} \bigcirc$ they will float lower in the liquid, but not sink to the bottom
$\mathbf{C} \bigcirc$ they will stay at the same level in the liquid
$\mathbf{D} \bigcirc$ they will float higher in the liquid

1 pt The after-dinner speech is especially boring, so you continue to look for amusement. When the speech begins, you add several ice cubes from your drink to your soup, and you note the liquid level in the bowl. At the end of the long speech, all of the ice has melted. Compared to the liquid level after you initially added the ice cubes, the liquid level in the bowl is now:
